

Asset Delivery

1. A title

Echoes of Green

2. A logo (a quick sketch is fine)

[Credit](#)

I like the idea of something like this for the logo because it shows the brain that represents being conscious and the plants on the side that show plant matter having consciousness.

3. A draft of writing for your home page introduction, which might possibly recycle some writing from your original Proposal

(ai generated)

The Truth About Plants: What They Don't Want You to Know

For decades, the truth has been buried—hidden behind closed lab doors, erased from scientific reports, and dismissed as pseudoscience. But we were there. We saw the evidence. We ran the experiments. We witnessed the impossible. And when we tried to share our findings, we were silenced.

We are a rogue collective of botanists, researchers, and former insiders who have risked everything to bring you the truth: **Plants are conscious.** They **retain memory, feel emotions, and respond to human energy in ways the world is not ready to accept.**

The government, the scientific elite, and corporate interests don't want this knowledge in your hands. They fear what might happen if people understood the true intelligence of nature—if we stopped treating plants as mere resources and started recognizing them as sentient beings.

This website is our resistance. Here, we will reveal classified research, leaked documents, and firsthand accounts proving that plants are aware—and that they are reacting to us in ways more profound than you can imagine.

We are in hiding. They are looking for us. But as long as we have a voice, we will not stop.

Read. Learn. Open your mind. The truth is in the leaves, the roots, the whispers in the wind. And now, it's in your hands.

4. **A draft of writing for the "about" section,** which details the fictitious organization/entity that is creating the website

About Us: The Rogue Botanists

We were once trusted scientists. Respected researchers. Experts in botany, neuroscience, and bio-communication, working in state-of-the-art labs funded by the very institutions that now hunt us. Now, we are fugitives.

For our safety, we operate under codenames:

 **"Hawthorne"** – Lead plant neurobiologist, former director of classified research on plant cognition. He discovered that plants retain memory and communicate using bioelectrical signals—only to have his work erased.

 **"Willow"** – Ethnobotanist who worked on government-sponsored projects to decode plant intelligence. She realized too late that her research was being used to suppress, not reveal, the truth.

 **"Foxglove"** – Biotechnologist specializing in plant-based signal transmission. He proved that plants can react to human thoughts—only to have his findings confiscated and buried.

 **"Cipher"** – Data analyst and whistleblower. When she uncovered the extent of classified plant research, she encrypted files and fled with the evidence. Now, she keeps this website running from the shadows.

We cared because we **saw it with our own eyes**—plants responding to emotions, warning each other of threats, even remembering past experiences. And we cared because we saw what happened to anyone who tried to speak up. Careers ruined. Lives threatened. The truth silenced.

We are The Rogues. We won't stop until the truth is free.

5. **A description** of something to satisfy the "**memorial**" requirement

There will be a memorial to a fallen researcher who alerted other scientists who were in the dark about what they were researching and why. He got killed by the government before he could join the rouges fully and flee.

(ai generated)

In Memoriam: "Oleander"

The First to Speak. The First to Fall.

Before there were The Rogues, there was **Oleander**—the first scientist to risk everything for the truth.

A brilliant plant biophysicist, Oleander was the first among us to see the full picture. He connected the scattered pieces—the unexplainable plant responses, the suppressed data, the classified experiments—and realized what it all meant: **plants were conscious**. They could remember, react, even recognize individuals. And someone was working hard to keep that hidden.

He couldn't stay silent.

Oleander tried to warn us, reaching out to trusted colleagues in secret. But secrets have ears. Before he could escape and join us, he was silenced. The official report claimed an accident—a tragic "lab fire" with no survivors. But we know better. His research was confiscated. His name was scrubbed from the records. The first whistleblower erased before the world could hear him.

But we remember.

Oleander's work laid the foundation for everything we fight for today. Without him, we might never have seen the truth before it was too late. His sacrifice will not be in vain.

They took his life, but they cannot kill the truth.

This site is dedicated to him. **His voice lives on through us.**

Rest in power, Oleander. 🌿

6. **3 pieces of "research"** to support the premise of your Final Project. These should be drafts writings*, and should include quotations/links to any other resources (if possible) that support your research.

These are real pieces of research that just so happen to coincide with my fictitious truth.

1. [Plants Have Memory \(Mimosa Pudica Study - Monica Gagliano, 2014\)](#)

Monica Gagliano, an evolutionary biologist, conducted experiments on the *Mimosa pudica* (the "sensitive plant"), which folds its leaves when touched. She trained the plants to stop reacting to harmless stimuli by repeatedly dropping them in a controlled way that caused no harm. Over time, the plants "learned" to stop closing their leaves, suggesting they remembered the experience and adjusted their response. Even weeks later, the plants retained this "memory" without a nervous system.

2. [Plants Respond to Human Emotions \(Cleve Backster's Polygraph Tests, 1966\)](#)

Cleve Backster, a former CIA polygraph expert, attached a lie detector to a plant and found that it produced electrical responses similar to a human experiencing emotions. The most famous part of his experiment? When he merely thought about burning the plant's leaves, the polygraph registered a dramatic reaction—suggesting that the plant somehow sensed his intent.

3. [Trees and Plants Communicate Through an Underground Network \("Wood Wide Web"\)](#)

Research by forest ecologist Suzanne Simard has shown that trees and plants use mycorrhizal fungal networks to send nutrients, warning signals, and even chemical "messages" to one another. Older, larger trees—dubbed "Mother Trees"—support younger saplings by feeding them sugars and alerting them to dangers. Dying trees even "will" their nutrients to the next generation.

7. **Any images that will be included in your "research".** If the images were found online, then name the source and provide the URL. If original photos, then credit yourself as the photographer. If images are going to be your own artworks that need sufficient time, then it's ok to create a sketch for the time being.

I genuinely have no clue what the visuals for this are going to look like yet this early on. I was thinking about some plant photos with them hooked up to a machine and a graph showing results on a screen but im going to 3D render it all.

[Credit](#)

This is just an expensive automatic waterer but this is the visual idea.

8. **Any videos or audio that will support your research.** Provide sources for found materials**. If you are planning to create your own video or audio — and you need more time to get these elements together — then describe what you intend to record the best you can.

Still trying to find good video resources but this seems like a good start

<https://www.youtube.com/watch?v=DrDGHYRDVNc&pp=ygUdcGxhbnRzIGZlZWxpbmcgaHVtYW4gZW1vdGlvbnM%3D>

I may have to generate the scientists voices with elevenlabs AI or something of the sort.

9. **A draft of writing regarding the recruitment/membership process**

(ai generated)

This is not for the weak. This is not for the doubtful. If you seek the truth, be prepared to fight for it.

Step 1: The Awakening

Before you can join us, you must prove you see beyond the lies. Read through our research, analyze the evidence, and open your mind. If you still believe what they tell you—that plants are just mindless organisms—this path is not for you.

Step 2: The Test

Those who wish to join must complete a test—one designed to filter out spies, skeptics, and those who lack the will to go further. The test is different for each applicant, but expect:

- ✓ Deciphering hidden messages in scientific data
- ✓ Proving your knowledge of plant consciousness
- ✓ Demonstrating an ability to communicate securely

If you fail, you'll never hear from us again. If you pass... we move forward.

Step 3: The Signal

If you are deemed worthy, you will receive a signal—a coded message, an encrypted email, or something hidden in plain sight. This means we are watching. It means you are close.

Your task? Decode the signal. Respond correctly. Prove you are ready.

Step 4: The Contact

Only after passing every layer of security will you be granted access to the network. We do not meet in person. We do not reveal our real names. You will receive limited access at first—information you need, but nothing that could expose us if you turn. Trust is built over time.

Those who prove themselves will rise.

Step 5: The Mission

As a member, you will be given assignments:

-  Spreading the truth in ways they can't trace
-  Conducting independent research and reporting back
-  Helping secure our online presence from takedowns
-  Tracking government suppression of plant intelligence research

Some members go deeper. Some infiltrate. Some become ghosts.

But once you are one of us, there is no turning back.

10. **A product** offered by this website, which could be merchandise, a service, or perhaps a paid membership. If this is an object that someone could buy (such as apparel or a gadget), then a quick sketch of the item is fine.
-

(ai generated)

The Resonance Patch

They hear you. Now, you can hear them.

The **Resonance Patch** is not just a product—it's a key to unlocking the hidden frequencies of plant consciousness. Using **bioelectric signal amplification**, this small wearable patch allows you to detect and interpret plant responses in real time. Whether you're touching a leaf, standing near a tree, or tending to your garden, you'll receive subtle vibrations and signals that align with plant biofeedback.

How It Works

- Uses microcurrent sensors to read plant bioelectric shifts
- Converts signals into subtle haptic feedback—so you can *feel* the plant's response
- Works on any living plant, from houseplants to the deep forest
- Lightweight, discreet, and completely untraceable

What This Means

For the first time, you can sense what plants feel. You can tell when they recognize you, when they react to emotions, when they warn of danger. You will experience the truth firsthand—and once you do, you'll never see the world the same way again.

Limited Availability: Due to the nature of this technology, we release the Resonance Patch in waves to avoid detection. Only trusted members will have access to early releases.

They've kept the truth hidden long enough. Now, you can hear it for yourself.

The Obscura Seed Pack

Not all plants are ordinary. Some remember. Some warn. Some protect.

The **Obscura Seed Pack** is a carefully curated selection of plants that exhibit enhanced bioelectrical activity and response sensitivity. Hand-selected by our rogue botanists, these plants are known to have heightened reactions to human presence, emotion, and environmental shifts.

What's Inside?

- **"Whispervine"** – A fast-growing vine that has shown signs of memory retention and preference for familiar humans.

- **"Sentinel Fern"** – Known for its ability to react to sudden movements and shifts in energy fields.
- **"Echo Bloom"** – Emits subtle fragrance changes depending on surrounding emotions and intent.
- **Instructions for Activation** – A guide to help you prime your plants for enhanced perception and track their responses.

Why It's Special

These are not ordinary plants. The government has classified similar specimens in restricted bio-experiments, but we have secured seeds for those ready to test the truth themselves. With the Obscura Seed Pack, you can grow and observe the phenomenon firsthand—watch as they learn, react, and possibly even remember you.

Warning:

- Keep out of reach of government agencies.
- Do not discuss your results in unsecured channels.
- Trust only those who understand.

Limited Stock – Available to Approved Members Only

The plants are waiting. Will you listen?

11. **A draft writing of the conclusion**, which might be a sort of call-to-action for the audience.

(AI generated)

The Truth is Growing. Will You Nurture It or Ignore It?

They've buried the evidence. They've silenced the voices. But the truth can't be uprooted. It's alive, waiting for those who are willing to see.

This is your chance to step beyond the lies. To witness, to learn, to fight. Whether you listen through the Resonance Patch, grow the Obscura seeds, or join the ranks of those who refuse to look away—**the choice is yours.**

But know this: **once you see the truth, there's no turning back.**

Are you ready?

*****NOTE*****

All AI generated words and will be edited by me later for more precision with tone and execution.
